Fabric Wrapped Ceiling Clouds & Sonex Valuline™ give Home Theater “Great Acoustics”!

By Ted Weidman:

My customer George called looking for some acoustical panels for his home theater. We treated the room with some custom made **Fabric Wrapped Fiberglass Ceiling Clouds** which were spaced geometrically to reduce the ceiling reflection point. We also fabricated specific size, 2" thick fabric wrapped fiberglass panels to fit into certain locations on the walls which would have been reflection areas otherwise. On the wall behind the TV and speakers, George installed 128 square feet of 1 7/8" thick **SONEX Valuline™** in both natural white and light gray. After the panels were installed he had time to use the room.

This is the customer's comment:
“Our home theater is finally done, and the acoustics are GREAT!”

*Best Regards,
George*

SURFACES INC.

Soundproofing | Acoustics | Noise & Vibration Control

For George's home theater, he chose to treat the room with our 2" Fabric Wrapped Fiberglass ceiling clouds and wall panels along with some 1-7/8" thickness Sonex Valuline acoustical panels. The fabric that he chose was Guilford FR 701 #538 Silver Papier and provided measurements for the panels that would fit specifically into his room. For the wall near the electronics, George chose the natural white as well as the natural light gray Sonex panels which are made with white melamine foam. For the gray panels, the manufacturer puts a light gray die into the foam mix during production. All of these products are Class A fire rated and have excellent absorption coefficients.

If you have any questions about this installation, please feel free to contact Ted Weidman at 800.448.0121, or Ted@acousticalsurfaces.com
